EXPERIENCE

Censys Inc.

San Francisco, CA

Senior Customer Success Engineer

2024 - Present

- Translate engineering requirements into deployable architectures and integration plans, owning technical discovery through rollout across cloud environments and API-driven workflows.
- Architect multi-cloud integrations (AWS/Azure/GCP) with SSO/SAML, RBAC, and REST APIs to operationalize AI-driven insights into downstream systems (Splunk, ServiceNow, and custom workflows), reducing manual triage by up to ~30%.
- Designed and deployed internal LLM assistants using document-constrained RAG with citation enforcement and hallucination guardrails, improving internal response speed and accelerating onboarding by ~40%.
- Contributed to the development of an MCP server layer to enable structured tool invocation and secure integration between LLM workflows and internal systems, supporting extensible agent-style execution against internal APIs.
- Orchestrated cross-functional technical resolution of complex deployment blockers, preserving nearly \$1M in strategic revenue.
- Lead structured enablement workshops and phased rollout programs for new product activations, defining sequencing, champion strategies, and adoption benchmarks; translate objectives into measurable adoption roadmaps with baseline metrics and value realization frameworks that drive expansion.

Darktrace

Los Angeles, CA

Senior Sales Engineer

2021 - 2024

- Designed and executed technical evaluations and proof-of-concepts for AI-driven platforms, constructing benchmark methodologies to assess precision, operational tradeoffs, and integration feasibility.
- Worked directly with founders and engineering teams to evaluate deployment architectures and translate model outputs into production-ready API and SIEM integrations.
- Contributed to \$5M+ in new and expansion ARR by winning competitive technical evaluations and aligning AI platform capabilities with customer architecture requirements.
- Structured rollout sequencing and activation strategies across high-growth environments, accelerating AI platform deployment by ~30%.
- Provided technical enablement as global SME for newly launched AI product line, mentoring 40+ engineers and supporting rapid adoption across distributed teams.

Everyset Inc.

Los Angeles, CA

Software Engineer - Mobile App Development

2020-2021

- Sole developer tasked with rebuilding the mobile app as a cross-platform solution using React, React Native, and TypeScript, streamlining onboarding and boosting user engagement by 15%.
- Redesigned core web and mobile workflows for a more intuitive UX and implemented Agile (Scrum) practices as acting Scrum Master, managing sprints via Trello to drive transparency and on-time delivery.

PROJECTS

- **MoneyRank (Founder & Sole Developer)** – Architected a decision intelligence platform using scoring algorithms, percentile rankings, and risk-grading systems to generate interpretable, risk-adjusted behavioral insights. Integrating Claude Code and Cursor into daily development workflows to accelerate prototyping, refactoring, and context-aware code generation, applying structured prompting and iterative validation to maintain reliability.
- **Car Wash Mobile App (Sole Developer)** – Designed and built a mobile app for a local car wash business, supporting subscriptions, location services, and promotions to streamline customer engagement and revenue growth. Used Claude Code and Cursor to reduce development friction, speed debugging cycles, and accelerate feature delivery through AI-assisted implementation.
- **QueuedUp (Product Manager & Engineer)** – Led product design and development of a networking app for students, managing a 4-person team and delivering 95% of backlog per sprint using ReactJS, Redux, and Firebase.

EDUCATION

University of California, Santa Cruz

2021

Bachelor of Science, Computer Science

SKILLS AND TOOLS

Programming Languages: Java, Javascript, Typescript, Python

Frameworks & Tools: React, Node.js, Django, AWS, Kubernetes, Docker, Terraform, MySQL, Cursor, Replit
